URL (live site): here

Part I: Recreating Your Client Site With NodeJS

I created the requested project's folder structure and the server.js file. I didn't recreate the whole page as I'm already using Node.JS along with React.JS so it would be a lot of effort to recreate all the components and pages to use plain .html files and also I'm using TailwindCSS so I have the same issue on switching to use standard CSS. This way, I added a basic homepage and the 404page.html so that it can be tested how it serves correctly the pages, images and everything.

Part III: Hosting Your Site

The live site is hosted in *Render*. Here's the link to access the live site:
